Functional Prototype

Description

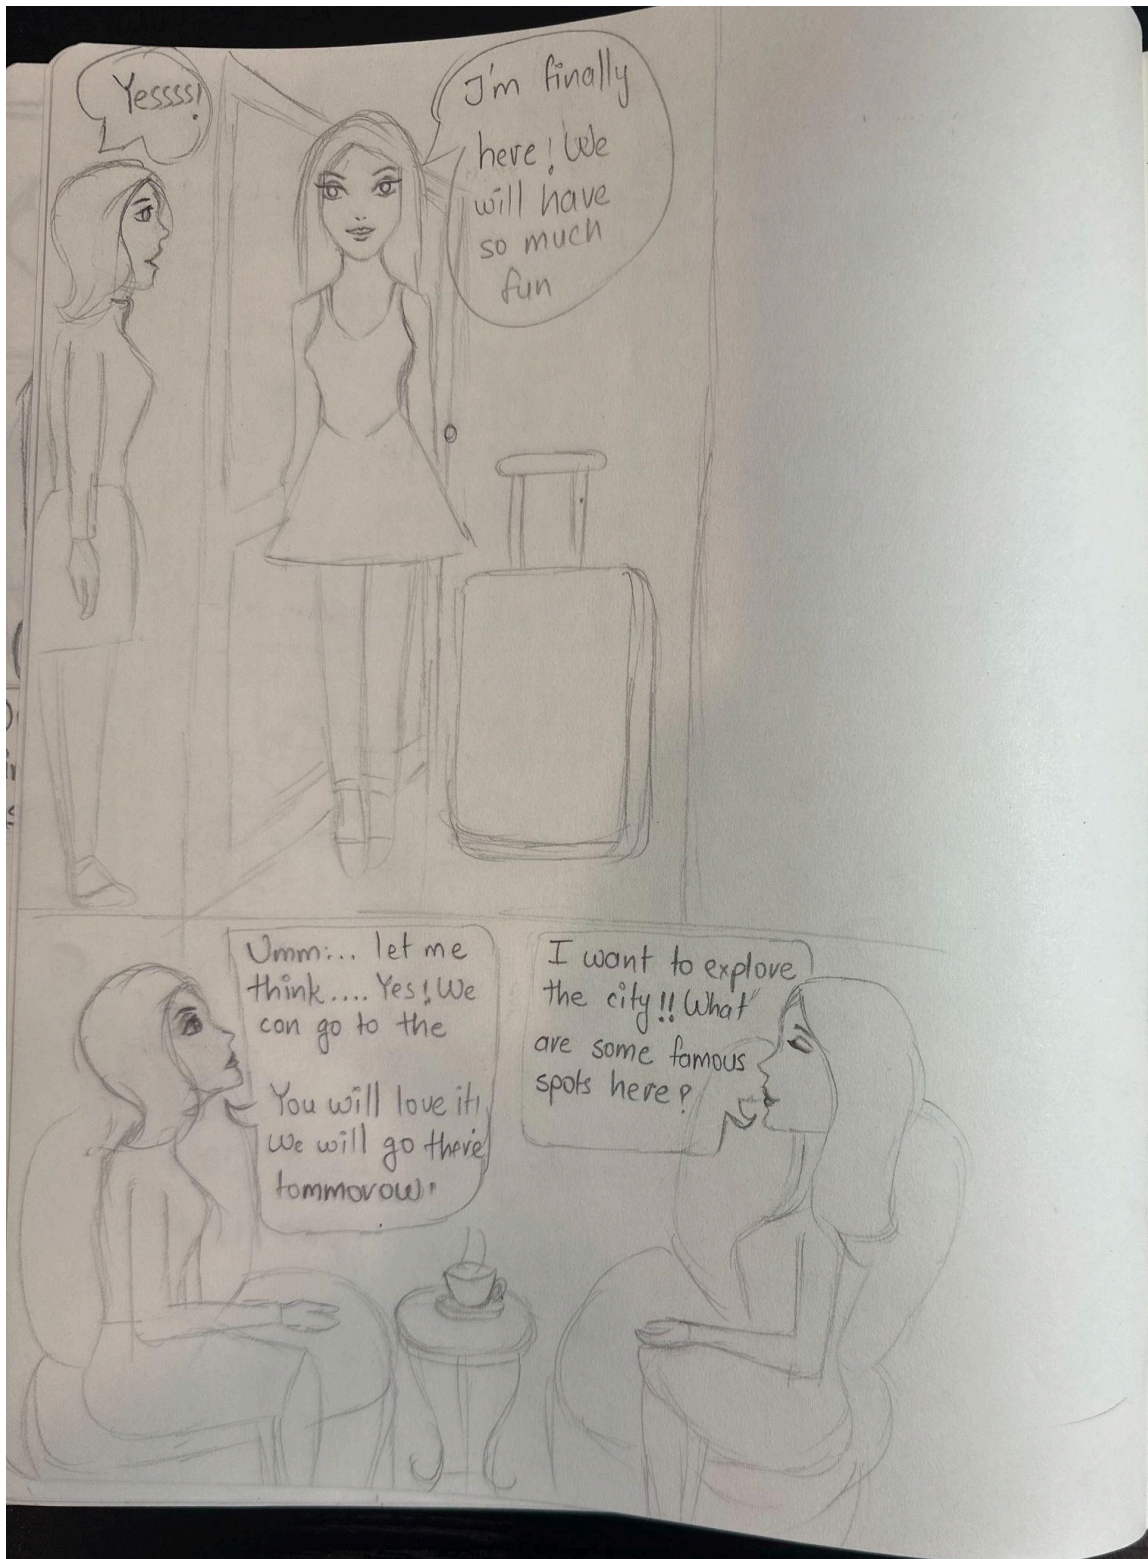

The product we chose to highlight in our functional prototype is a website that helps users navigate the Philadelphia Art Museum. We chose a website rather than a mobile application because museum visitors often purchase tickets and research exhibits before arriving, and we wanted to make sure we built an intuitive website to attract more visitors to the museum rather than deter people with a required app download. We chose the Philadelphia Art Museum because it is a local museum in our community, and it is one of the largest and most visited museums in North America. We decided to develop a website that would serve both museum visitors and local Philadelphia residents who want to become more involved with the museum, its exhibits, and the city's history.

For our project, we wanted to make sure to create a clickable prototype that embodies the purpose of our website, which is to create a user-friendly application for users wanting to visit the museum and to share events/opportunities for Philadelphians to get involved in the museum and the history of the city. One of the key actions we worked on for the website prototype was the user's ability to buy online tickets to visit the museum. The scheduling page allows users to select a visitation date, an available time slot, and the type and quantity of tickets they would like to purchase. It also informs users about museum donations and promotional codes before providing a complete order summary and sending them to the checkout page.

The second key action we worked on for the website was generating pages that kept users updated on the museum's collections and upcoming events. These events show opportunities for Philadelphians to get involved, so we wanted to make sure that it was very intuitive and easy to use. The collections page presents the Philadelphia Art Museum's current and future art collections, and the upcoming events page enables users to remain up to date on the latest happenings at the museum on a weekly and monthly basis.

Our goal was to create a user-friendly website that museum-goers can use to efficiently purchase tickets, make donations, and learn about current collections and upcoming events.

Storyboard

MUSEUM

Oh no!
What do
we do?

1
Sorry, but
we are fully
booked today!

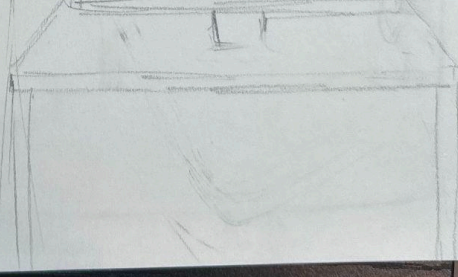

2
I would suggest
you download
go on our web
site and book
online. That way
you can plan
ahead!

The museum was
fully booked today?
But the guy told me
to book online through
the website

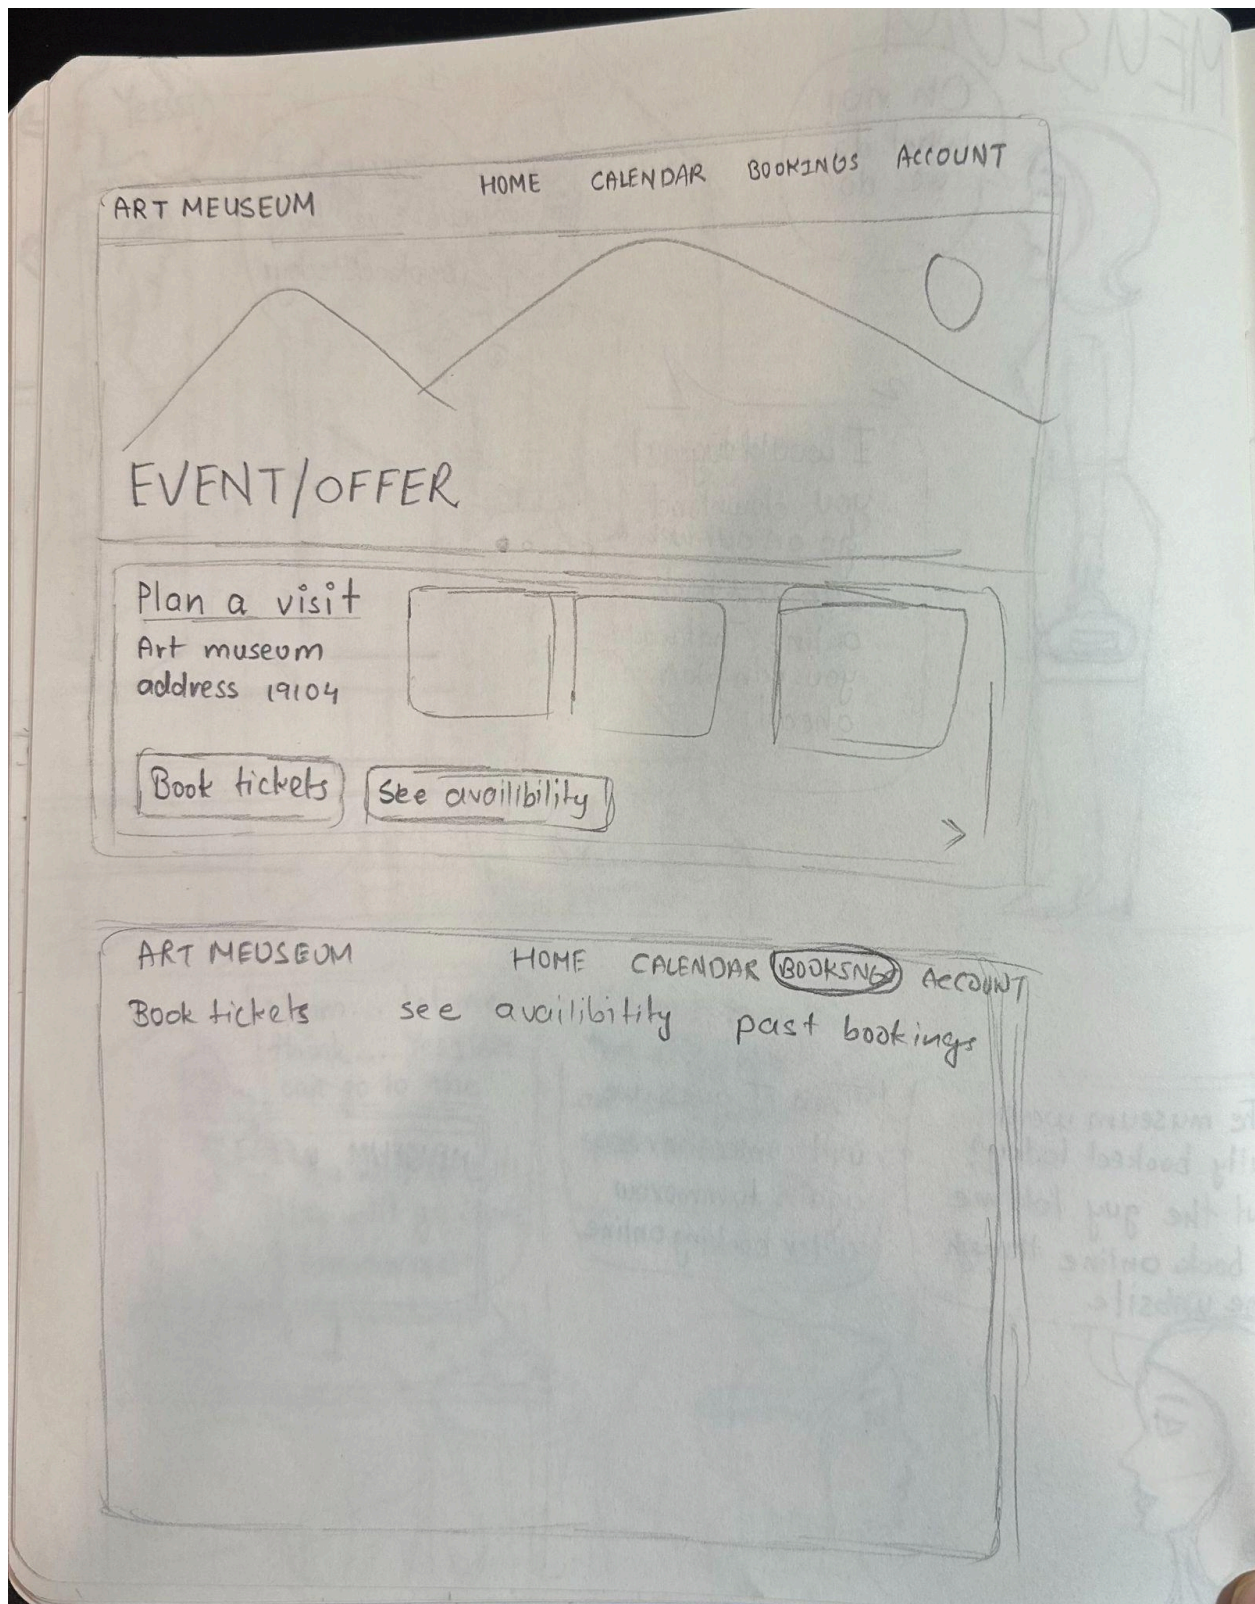

Then I guess we
will come here
again tomorrow
after booking online

About
Step into the world of Vincent van Gogh through 60 original works tracing the evolution of one of art's most passionate visionaries. The exhibition follows his journey from the muted, earthy tones of his early years in the Netherlands to the explosive color and emotion of his time in Arles, France – each canvas a window into an artist in constant pursuit of something true and more alive.

Clickable Prototype

One of the key actions we worked on for the website was the ability for users to buy online tickets to visit the museum. The scheduling page on the website provides users with a calendar that they can use to select the exact date of their desired visitation. Once a user selects a date, the scheduling page will generate a list of available time slots and the number of visitor spots left for that slot. Once a user selects a date and time slot, they will then select the type and quantity of tickets they would like to purchase. Infants will gain entry to the Philadelphia Art Museum for free, children will be charged \$10, adults will be charged \$20, and seniors will be charged \$16. The scheduling page will also make users aware of museum donations and promotional codes. The “Support Our Mission” section of the page will inform users that their voluntary monetary donations will allow the museum to support local school programs, community events, and its permanent art collection. The user can donate a set amount or choose a custom donation amount. Users can also input a unique promotional or discount code to reduce their ticket prices at checkout.

The second key action we worked on for the website was pages that kept users updated on the museum’s collections and upcoming events. The “Related Events” section located at the bottom of the events page presents the Philadelphia Art Museum’s current art exhibitions. This section enables users to navigate the assortment of diverse collections housed throughout the museum. The “What’s on” page highlights events occurring at the museum. Users can get tickets to a specific event on the same page by selecting the “Book Tickets” option displayed below the event details. Selecting this option will redirect the user to the scheduling page, where they will be able to purchase their tickets. The “What’s on” page provides users with a short description of the event, discloses the event organizers, and showcases other helpful preparatory information.

User Feedback

To get feedback on our prototype, we were able to recruit our friends, two college students with similar interests in travelling and visiting museums, to view our clickable prototype because they frequent various museums around the country and are familiar with using museum websites to plan their trips. We met with them in person and documented their responses on paper. We explained that they should act as two potential users for our website to give us feedback pertaining to the usability, intuitiveness, and presentation of our website. They were also asked to comment on how our website can be improved.

Both students offered us positive feedback about our clickable prototype. They stated that our initial designs were easy to follow and would make navigating the museum website easy for users from all walks of life. Both students thought that our scheduling page was very comprehensive. They appreciated that users could select a visitation date, visit time, and pay for tickets on the same page. The second college student stated that this level of comprehensiveness eases the mental burden of the user and makes purchasing museum tickets a straightforward process. Both students also gave us positive feedback on our events page. They thought it served as a great way for local Philadelphians to see upcoming events they could attend. The first student believed it was a good idea that the event page had sample images of the listed events to give potential museum-goers a better idea of their upcoming experience.

The two undergraduate students provided us with constructive feedback on ways our website can be improved. The first college student recommended adding more details to the pricing section of our scheduling page. The student mentioned the addition of reduced ticket prices for various populations, such as members of the military or first responders. This addition would make community members aware of available savings and demonstrate the museum's commitment to honoring those who have chosen to serve others. The second college student suggested that we add a more scheduled donation option to that particular section. If faithful museum attendees or philanthropists want to give monthly or yearly, there should be an option to donate with that frequency. The second student also suggested that we include a dedicated section for free community events hosted by the museum. The student explained that highlighting free events could encourage more locals to visit the museum, even if they were not planning to purchase admission tickets. This feature could help increase community engagement and make the museum feel more accessible to a wider audience.

Overall, the two potential users gave us valuable feedback and helpful constructive criticism concerning our museum website. Their feedback and suggestions will permit us to create a website that Philadelphia Art Museum attendees can easily use to visit this world-class establishment with friends and family. Based on this feedback, future iterations of the prototype would include expanded discount categories, recurring donation options, and a dedicated section for free community events to better support different visitor needs.

Design Justification

Our design process began with low-fidelity sketches and wireframes that helped us map out the major tasks users would complete on the website before creating the high-fidelity prototype. Creating wireframes first allowed us to focus on the overall structure, navigation, and user flow without spending time on visual details too early in the process. As we refined our wireframes, we identified ticket purchasing and event exploration as the two most important tasks users would need to complete efficiently.

For the ticket purchasing experience, we focused on reducing the number of steps required to reserve museum admissions. Instead of spreading the process across multiple pages, we designed a scheduling page that allows users to select a date, choose a time slot, select ticket quantities, add donations, apply promotional codes, and view an order summary in a single location. We believed this approach would reduce confusion and make the purchasing process faster and more intuitive for visitors. We also included availability indicators on both the calendar and time slots, so users could quickly identify low-crowd dates and open time slots, reducing decision-making time and allowing visitors to plan their visits more efficiently.

For the collections and events sections, our goal was to encourage users to explore more than just ticket purchasing. The collections page allows visitors to browse current exhibits, while the events page highlights upcoming activities and special programs in an organized format. We included images and event details to help users better understand what the museum offers and to create greater engagement with the museum's programs.

User feedback confirmed that the website was easy to navigate and that the ticket purchasing process was straightforward. Participants especially appreciated being able to complete multiple actions on one page rather than navigating through several screens. They also provided suggestions for future improvements, including additional discounted ticket categories and recurring donation options. Participants also suggested creating a section for free community events, which could help attract local residents who may not otherwise visit the museum. If we continued developing this prototype, these suggestions would be incorporated into future iterations because they would improve accessibility and provide users with more flexibility.

Overall, our team designed the Philadelphia Art Museum website with a focus on usability, accessibility, and efficiency. Through wireframing, prototyping, and user testing, we were able to create a design that supports both museum visitors and members of the local community. The iterative design process helped us identify opportunities for improvement while ensuring the final prototype remained intuitive and user-friendly.
