

SOPHIA MOMAH

Philadelphia, PA | 504-444-7658 | sophia.momah@gmail.com | [linkedin.com/in/sophiamomah](https://www.linkedin.com/in/sophiamomah) | sophiamomah.github.io

Software Engineer specializing in React, TypeScript, and enterprise web applications. Experienced building scalable user-facing products, integrating REST APIs, developing reusable UI components, and collaborating with designers and product managers to deliver intuitive, production-ready experiences.

Skills

Frontend: TypeScript, React, JavaScript, HTML5, CSS3, Kendo UI, Bootstrap

Backend: Python, C#, SQL, .NET, ASP.NET MVC

Testing: Jest, Selenium, Unit Testing, Integration Testing, TestComplete, TDD

Cloud & Tools: AWS (Lambda, S3, API Gateway), DynamoDB, REST APIs, Git, GitHub, GitLab, Azure DevOps, CI/CD, Jira, Figma

Experience

Bentley Systems

Philadelphia, PA

Software Engineer Co-op

Sep 2025 - Mar 2026

- Developed React and TypeScript features for Bentley's enterprise document management platform, delivering scalable user experiences for more than 100,000 users.
- Refactored shared React components into reusable modules, improving maintainability, consistency, and code reuse across multiple applications.
- Built and tested production-ready frontend features using React, TypeScript, and Jest while collaborating closely with backend engineers, designers, and product managers throughout the development lifecycle.
- Wrote unit and integration tests with Jest and worked with backend engineers, product managers, and designers to deliver production-ready functionality.

Susquehanna International Group (SIG)

Bala Cynwyd, PA

Software Engineer

Apr 2023 - Jul 2024

- Developed web applications using JavaScript, HTML/CSS, Kendo UI, C#, and .NET, creating internal tools that streamlined business workflows.
- Integrated frontend applications with REST APIs to support reliable data exchange and responsive user experiences.
- Engineered electronic-communications archiving solutions supporting more than 75% of firm communication channels.
- Created a web application for management to efficiently process tickets, improving organizational productivity by over 20%.
- Debugged complex systems, optimized SQL data access, and contributed to Git code reviews, CI/CD workflows, and Agile delivery.

Amazon

Seattle, WA

Quality Assurance Engineer Intern

Jun 2022 - Sep 2022

- Validated quality for Amazon Music customer-facing features by designing automated and manual test strategies across multiple release cycles.
- Worked with software engineers to investigate defects, improve feature quality, and ensure reliable user experiences before production releases.
- Created and maintained automation scripts, modified test cases, and made changes for testing of new features.
- Developed efficient test solutions and simple tools to minimize manual efforts, enhancing feature quality through automation.
- Investigated automation failures and software defects, partnering with developers on root-cause analysis and resolution.

Inspire Energy

Philadelphia, PA

Software Engineer Co-op

Mar 2021 - Sep 2021

- Developed frontend and backend features for Acquisition Services applications using JavaScript, HTML/CSS, and Ruby.
- Used the Agile methodology in day-to-day planning and participated in daily scrum meetings to discuss progress, identify roadblocks, and plan sprint tasks, contributing to enhanced team collaboration and project efficiency.

Susquehanna International Group (SIG)

Bala Cynwyd, PA

Software Development Automated Tester Co-op

Apr-Sep 2020; Mar-Jun 2022

- Built scheduled automated test suites in Python using Selenium and TestComplete for enterprise applications.
- Performed SQL and API testing and collaborated with developers to validate fixes and improve release confidence.

Teaching Assistant, Drexel University

Philadelphia, PA

Software Engineering & Development | Computer Game Design & Development

Sep 2025 - present

- Guided students through debugging, programming concepts, software-engineering assignments, and technical project development.
- Reviewed code and explained software-engineering concepts during office hours and class sessions.

Projects

Cloud-Based Order Management Platform | Python, AWS Lambda, API Gateway, DynamoDB, Pulumi: Built serverless REST endpoints, provisioned infrastructure as code, and validated API workflows with Postman.

CollabArt Gigapixel Annotation Platform | Java, REST APIs, AWS S3, AWS Lambda: Developed a full-stack web application for annotating gigapixel images, implemented REST APIs for frontend-backend communication, optimized performance for large image rendering and annotation workflows, and leveraged AWS S3 and Lambda for scalable storage and serverless processing.

Education

M.S. in Computer Science | Drexel University | GPA: 4.0

Expected Dec 2026

B.S. in Computer Science | Drexel University | Magna Cum Laude, GPA: 3.8

Jun 2023
